Dr. Joshua Lederberg  
Department of Genetics  
University of Wisconsin  
Madison 6, Wisconsin

Dear Dr. Lederberg:--

Dr. Hinshaw has referred your letter to me. I am sending several maltose-fermenting strains of S. pullorum to you. P 52 and P 85 are both chick strains which engendered maltose-positive variants in the laboratory. P 222 (chick), P 225 and P226 (poults) fermented maltose rapidly on original isolation.

I enjoyed your seminar here, and am sorry I didn't have an opportunity to talk to you. I've been following your work with great interest.

Sincerely yours,

Associate Professor

Ethel McNeil
